Testville  
Testerton  
AB12 3CD

Dear Sir,

### **Re: Data encryption**

Thank you for your recent letter, requesting information about Depositit's secure data backup solution and the data encryption we use.

Encryption is a security method of scrambling information within a file so as to make it completely unintelligible. All data stored at Depositit is retained in a highly encrypted format so that there is no possibility of unauthorized access.

The mode of encryption employed by Depositit is called Blowfish, one of the most sophisticated algorithms available. It is endorsed by the military and widely used by the banking and telecommunications industries.

Depositit encrypts your data using 448-bit technology (over 3 times the level used by most Internet banks), ensuring complete privacy and guaranteeing, nobody but you can ever view it.

Additional Encryption is used during the payment process. All payments are made by either credit or debit card and processed on-line by WorldPay Secure Payment services, a leading provider of secure online payments. WorldPay encrypt all card details and do not make them available to suppliers, as such Depositit do not hold and never see any customer's card details.

Yours faithfully,

**Depositit Customer Care**
